

13  
White, 1661.

A New

# ALMANACK

For the year of our Lord God,  
1661.

Being the year from the worlds  
Creation 5620.

And the first after the Leap-year.

Calculated and properly referred  
to the Meridian of *Todington* in *Bedford-*  
*shire*, where the pole is raised above the  
horizon 52. degrees and 8. minutes, so  
that it may serve for all parts of *Eng-*  
*land*, without any sensible error.

---

By William White.

---

*Laudate eum Sol & Luna, Laudate eum omnes  
Belle lucis, Psal. 148. 3.*

---

LONDON

Printed by Robert White, for the  
Company of Stationers. 1661.

## A brief and necessary Computation of Y E A R S.

Since the Conquest of England by Duke William	593

**A Table to know when the Terms begin and end, and the number of their Returns, with the day of the month whereon they will be this present year 1661.**

---

Hilary Term begins the 23 of January, and ends the 12 of February, and hath 4 Returns, <i>Viz.</i>	}	Octab. Hilarii	January 10
		Quind. Hilarii	Jan. 17
		Craft. Purif.	February 3
		Octab. Purif.	February 11

---

Easter Term begins the 1 of May, and ends the 27 of May, and hath five returns, <i>Viz.</i>	}	Quind. Pascha.	April 29
		Tres. Pascha.	May 6
		Mens. Pascha.	May 13
		Quind. Pascha.	May 20
		Craft. Ascens.	May 24

---

Trinity Term begins the 14 of June, and ends the 3 of July, and hath 4 Returns, <i>Viz.</i>	}	Craft. Trinit.	June 10
		Octab. Trinit.	June 17
		Quind. Trinit.	June 24
		Tres Trinit.	July 1

---

Michaelmas Term begins October the 23. and ends the 28 of November, and hath 6 Returns, <i>Viz.</i>	}	Tres Mich.	Octob. 21
		Mens. Mich.	Octob. 28
		Craft. Animar.	Novemb. 4
		Craft. Mart.	Novemb. 25
		Octab. Mart.	Novemb. 18
		Quind. Mart.	Novemb. 25

## Of the Ecclipses this Year. 1661.

**O**F four Ecclipses which will be observed by the Inhabitants of this earthly globe, we in *England* shall see two of them, that is to say, the first of the Sun, and the last of the Moon.

**T**HE first Eclipse is of the Sun, which will be conspicuous in our horizon, upon Wednesday the 20 of *March* in the forenoon: the beginning of this Eclipse will be 34 minutes past 8 in the forenoon, the greatest obscuration 37 minutes past 9, the end 39 minutes past 10, the total duration is 2 hours 8 minutes, the digits Ecclipsed are 6 and 55 minutes.

**T**HE second Eclipse is of the Moon, on Thursday the 4 of *April*, between 3 and 4 a clock in the afternoon, about which time about a fourth part of the moons body shall be darkened by the passing of her south part through the earths Conical shadow, but it cannot be seen of us, because the Meridian thereof is so far removed to the Eastward, and therefore it may be seen in *East India*, in *Java* the great and less, and in the oriental kingdom of *Bengala*.

The third Eclipse is of the Sun, upon Saturday the 13 of *September*, but cannot be seen of us, but will be visible in *Africa* the south, the Islands of *St. Thomas*, and in the Neighbouring Tract of the southern land, yet unknown to us.

**T**HE last is an Eclipse of the Moon, which will be seen at *Todington* upon Saturday the 28 of *September* in the morning, the beginning of this Eclipse will be 41 minutes past 1 in the morning, the middle 58 minutes past 2, the end 16 minutes past 4, the totall duration of this Eclipse will be 2 hours 33 minutes. The Digits Ecclipsed are 6 and 55 minutes.

# January hath xxxi days.

Now it's a time unmeet to bleed,  
Yet Barks with Counsell thou maist use  
It is not good to purge, swear, bleed:  
No Phisick take, sweet drinks refuse.

# September hath xxx days.

Ripe fruits, but sound, in measure eat,  
Now spice you may eat with your meat.  
Now dog days gone, Bath, purge and bleed,  
And Physick take, if that you need.

# October hath xxxi days.

With good hot broths, and vesture warm,  
From Cold thy body keep :  
Good store of food will do no harm,  
Drink old good wine, and largely sleep.

NOTICE. 1661.

A Prognostication for  
this Year of our LORD  
GOD, 1661.

Being the first after Bissextile, or Leap-year

Wherein is contained a briefe  
computation of years.

With a Geographicall Epitome  
or Description of ENGLAND  
and WALES, &c.

*Together with all the Paires both fixed  
and moveable.*

And at the end of the book, is the whole  
Almanack, contained in one Leaf, for this  
Year 1661. which being cut out, is fit to be  
placed in a Table-Booke, Booke  
of Accompt, or other.

LONDON,  
Printed by E. T. for the Company of  
STATIONERS, 1661.

A very plain and easie table to find the  
true interest due upon any Sum of mony,  
from five shillings to an hundred pounds  
for a year or under, after the rate  
of six pounds in the  
Hundred.

# The Explanation & Use of the former Map & Table

**F**irst for the Map: The figures in each shire of the map are to shew you the names of every County, & the Letters in the same are for uses, as I will shew hereunder.

You must understand that London is in Middlesex, which County of Middlesex hath the figures of 22 in it, & the little black speck . 02 spot therein signifieth London. Now if you would readily find the name of any shire therein, and how many myles the middle of the said County (in a straight line) is from London, & what point of the Compass it lyeth from the said City; resort then to the Table of Shires on the other side, and it will resolve you.

As for example, Barkshire it hath the figure of 1 in the map, & so it hath likewise in the Table; wherets shewed that the middle or heart of that shire is 40 myles from London in a straight line, & it lyeth full west from the City, and looking so: ward toward the right-hand, it sheweth it hath no City, 11 Markets-Towns, 2 Castles, 140 Parishes, 3 Rivers, & 13 Parks: Again, Buckinghamshire hath the figure of 3 in the Map, & so it hath before it in the Table, the heart or middle of which shire is from London 35 myles, & lyeth North-west & by west from the said City, it hath no City, 11 Markets-Towns, no Castle, 185 Parishes, 2 Rivers, and 15 Parks, and so of the rest.

The use of the Letters in the Map is: this, S corl. signifieth part of Scotland, I part of Ireland, F part of France, M the Isle of Man, W the Isle of Wight, L the Lizard point, H Holy-head, the \* the Irish Sea, B the British or English Sea, G the German Sea, Ba Barwick, D Dover, N Newcastle, C the points of the Compass, S the Scale of Myles, by which you may measure the distance of any place, for every black degree is like myles, so is every white.

The 39 Shires from Barkshire to Yorkshire are the English shires, & the other 13 from Anglesey, to Radnorshire are Welsh.

It may be something further in Myles to the middle of each shire, by reason of the crookednesse of the Highways & hills, and vallies, but what is here set down is meant in a straight line from London, as is said.

Rule

## A Prognostication.

### Rules of Mensuration

**A** Finger breadth is four barley cornes in thicknes, and an Inch three Barley cornes in length: A hand breadth four fingers: A span is three hands breadth: A foot is four hands breadth: A Geometrical Pace is five foot: an English Pearch is xvi. foot  $\frac{1}{2}$ : A furlong is a hundred and twenty five Pases, or six hundred twenty and five foot: An English Furlong is six hundred and threescore foot, or a hundred thirty two pases: A League is a thousand and five hundred pases: An Italian Mile is a thousand pases, or eight furlongs: A common German Mile is thirty two furlongs: An English Mile is eight furlongs. An Arre is forty Pearches: length, and four in breadth.

How to judge what Weather will follow, by the rising and setting of the Sunne.

**T**he Sun rising bright & clear, signifieth a pleasant day: If he rise fiery red, it promisseth rain: if in his rising he be thinly overtaken with a cloud, it betokeneth foul weather: if the sun or the clouds beset him into the West, it signifieth fair weather. If at his rising there appear a circle about him, & vanish away equally, it betokeneth fair weather. Also if he setteth red, it signifieth fair weather: If at his setting he be of divers colours, or clouds like water, it threatneth rain. If at the rising of the Sun, his beams seem red, or long, or encompassed with red clouds, it signifieth great winds: if at his rising there appear a thick mist, or if it raineth in the evening, it threatneth very foul weather to follow. Also if the Sun beams be spotted either green, pale, or black, or gathered to a cloud, it signifieth rain. The Sun setting clear without any cloud, signifieth a fair night to ensue. If the

circle, or circles about the Sun be clear, & of no continuance, look for fair weather: If there be many circles, it signifieth winds: the rounder they are, the more vehement winds. If the circles are here & there broken, & are thick & black, look for cold wind or snow: or if he settle behind a great black cloud, rain follows.

How Weather is foreknown by the Moon.

If the Moon in the third day of her change, or 3 dayes before her full, or in the midst of the quarter, be round of pure light, nothing compassing her, the ends direct up, she promisseth faire weather: but bent to red colour, provoketh winds. The Moon pale, or somewhat black or thick, threatneth rain. When the Moon is five dayes old, mark the tips of her horns, if they be blunt, it signifieth rain: if sharp pointed & pitching upwards, great winds. If in the fourth day after her change, she have a red circle about her, it signifieth winds and rain.

Of the judgment of Weather by the Stars.

If the Stars appear of much light, and seem to be of more bignesse and blazing then ordinary, it betokeneth great windes and maysture in that part where they seem so; and in winter, great frosts. When dim Stars appear with long stery tayles, it threatneth winds, and great drought: the more in number, the greater will be the effect. Also when Starres seeme to shoot or fall, it signifieth great winds in that place: If they seem to shoot in divers places, it signifieth divers windes: If in all places, windes, thunder, lightning, and most tempestuous weather.

How to judge of the weather by the Clouds.

Black clouds flying from the east, signifieth Draine at night, if from the west, rain the next day: if they fly low, and appear to settle upon the tops of hills, it is a signe of cold weather, if they

## White, 1661.

be full charged, and appear white like snows, hail is at hand: if white clouds appear in winter, two or three days together at sun rising, it is a sign of cold and snow; but black clouds signify rain. A red sky in the evening, and a gray morning is a sign of a fair day. Mists falling in the morning, in spring or harvest, also mists over ponds or waters in the morning signify rain. If the clouds fly swiftly in the ayre, it signifies rain from that part of the heavens, especially from the north or south. If thick white clouds gathered together in many places (the flocks, or heaps of wool, appear in many places, it is a sign of rain: but if thick dark clouds towards the north or west near the earth, presently rain, and if like hills a little above the earth, foul weather is over. If mists descend from the hills, and settle in the valleys, it is a sign of fair hot weather next day, or if white mists arise from the waters in the evening.

How to judge of the weather by the Rain-bow.

**T**he natural signification of the Rain-bow, is to shew rain either past or to come. The Rain-bow appearing when it is fair, is a sign of foul weather. When it is foul if it appear, it is a sign of fair weather: the greener it appears, the more rain; the redder the more wind, if before noon then the rain is spent; if the rain-bow appear about one or two in the afternoon then rain is near. A rainbow in the morning is a sign of wet (unless there be drought in the air): if it appear in the evening it is a sign of fair weather (unless the air abound with moisture.) A rain-bow at night opposite to the moon, is a sign of much small rain and wind to follow. A rain-bow after long rain is a sign of fair weather presently; if two rain-bows appear together, it is a sign of rain within one or two days after.

6. sh. 9. d.	0	5	12	0	8	9	0	11	

The proportion of the pound Avoir-du-pois to the pound Troy, is as 60 to 73, so that 60 pound Avoir-du-pois are equal to 73 pound Troy. The proportion of the ounce Troy to the ounce Avoir-du-pois, is as 73 to 80, so that 73 ounces Troy, are equal to 80 ounces Avoir-du-pois. Therefore the pound Avoir-du-pois is greater then the pound Troy: and the ounce Troy is greater then the ounce Avoir-du-pois.

Wheat at 5 shillings the Bushell or Stryke, the Town-Bakers penny white, is (by Troy) 7 ounces, 7 penny weight: by Avoir-du-pois 8 ounces: And the Country-Bakers penny white (by Troy) 7 ounces 13 penny weight: by Avoir-du-pois 8 ounces and one quarter. If the Baker want one ounce in 36 ounces of this Assize: he shall suffer the Pillorie: without any fine or admonition, 51 Hen. 3.

To

To find the time of the Sun-rising, or  
setting, and consequently the length  
of the Day and Night throughout the whole  
YEAR.

For the ready finding of the Sun's rising and setting, I have added the subsequent Table, the use whereof is thus: In the head of this Table (consisting of fourteen columns) are placed the names of the twelve Moneths, viz. January, February, &c. July, August, &c. and in the first & eighth Column thereof, are placed the daies of the Moneth, from 1. to 31. Moreover, in the head of the Table, under the names of the Moneths, is *Ris. S. Set.* which signifieth Sun-rising, and Sun-setting, and below that is *H. M. H.* which signifieth, Hours, Minutes, Hours.

For example.

I would know the Sun-rising and setting January 10<sup>e</sup> first, I find January in the head of the Table, and in the first Column on the left hand I find the tenth day, and right against the tenth day under January I find 7. 50. 5. which shews me, that the Sun riseth at seven a clock, and fifty minutes past in the Morning, and setteth at fifty minutes before five at night; and so for the rest.

Now if you would know the length of the day and night, do but double the hour and minute of the Sun setting, and the sum is the length of the day; and if you double the hours and minutes of Sun-rising, you shall have the hour of the night.

Example.

The tenth day of January I would know the length of the day and night: I find (by the precedent directions) the Sun riseth at 7. hours 50. min. which doubled is 15. hours 40. min. for the length of the night: and 4. hours 10. min. the Sun-setting being doubled, makes 8. hours 20. min; for the length of that day;

## A Prognostication.

The Explanation of a new and easie KALENDAR here following, for this present Year, 1661.

**N**Ote that every Month containeth three Rows of Columns (the Figures for the number of daies excepted) The first Column toward the left hand containeth the Week Dayes and Sunday Letter; the second the Sign wherein the Moon is every day. And the third the Changes & Quarters of the Moon. Note that the being thus O figured, doth signify the New Moon; & placed this way is the first Quarter: this is the Full Moon; and again this way is the last Quarter. Note also that the Figures over the head of the Moon, do signify the hower of her Change, Full, or Quarters, and the Letters above or beneath, the time after noon, or after midnight, N standing for After noon till Midnight, and M for after Midnight till Noon.

As for example, against the 22 Day of January, being Sunday, I do find the Moon (or Sign) in Aquarius, or the legs, and is thus O charactered, which is the change of new Moon at 3 in the afternoon. Again, on March the 27 Day being Wednesday, I do find the Moon in Cancer, or the breast, and is thus I charactered, which is the first Quarter at 11 in the forenoon; and so of the rest.

Note also, that at the head of every month is placed the rising and setting of the Sun for the midst of every month. As for example, for the midst of January, the ☉ riseth at 7. of the clock and 44 minutes; and setteth at 4. and 16 minutes, &c.

It also containeth (on the back side of the Leaf) for every month the Feasts both Moveable and Fixt, with the beginning and ending of every Terme: As Twelfth day is on the 6. of January, Easter day is on the 14 of April, Whitsunday is on the 2 of June. Terme begins on the 14 of June, and endeth on the 3 of July, &c.

A briefe and easie Almanack for this Year  
 1661. which being cut out, is necessary to be  
 placed into any Book of Accounts, Table-book,  
 or other, conteyning the whole Kalendar, in  
 a short method; By William Whire.
